Best Solution for Preventing Musculoskeletal Disorders

Cosk & Co

Rodroy Lifting Device

The RodRoy Lifting Device simplifies the task of lifting, carrying and rolling out floor coverings either in the showroom or on a worksite. Moving and rolling out floor coverings is traditionally a labour intensive task involving up to four people and forklifts can only be used to assist with this task in large spaces. The RodRoy uses a simple hand operated winding motion to allow the operator to easily lift and manoeuvre rolls of floor coverings. It is portable, easy to assemble, transport and use, and significantly reduces the potential for musculoskeletal disorders when handling rolls of floor coverings which can weigh up to 800 kg.
